Московский государственный технический университет им. Н.Э. Баумана Кафедра «Системы обработки информации и управления»

Лабораторная работа №2 по дисциплине «Методы машинного обучения» на тему

«Обработка признаков (часть 1)»

Выполнил: студент группы ИУ5И-23М Ли Хао

Москва — 2024 г.

1. Цель лабораторной работы

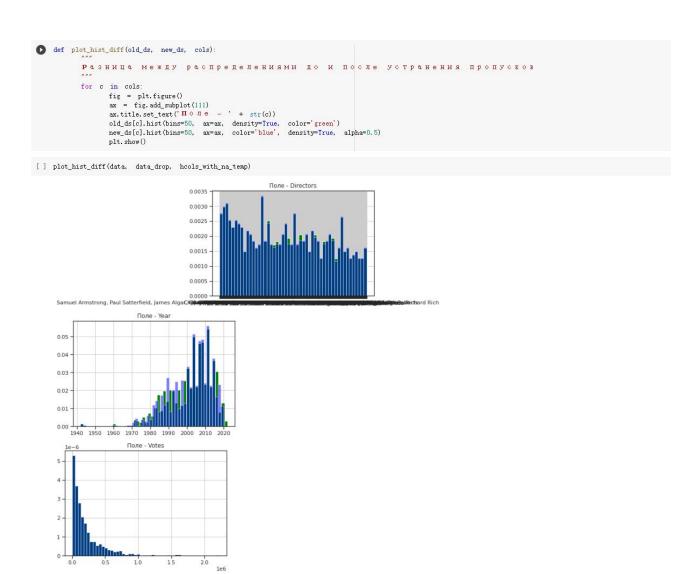

Изучение продвинутых способов предварительной обработки данных для дальнейшего формирования моделей.

2. Задание

- 1. Выбрать набор данных (датасет), содержащий категориальные и числовые признаки и пропуски в данных. Для выполнения следующих пунктов можно использовать несколько различных наборов данных (один для обработки пропусков, другой для категориальных признаков и т.д.) Просьба не использовать датасет, на котором данная задача решалась в лекции.
- 2. Для выбранного датасета (датасетов) на основе материалов лекций решить следующие задачи:
 - і. устранение пропусков в данных;
 - іі. кодирование категориальных признаков;
 - ііі. нормализация числовых признаков.

```

Исходное распределение

[] diagnostic_plots(data, 'median_house_value')

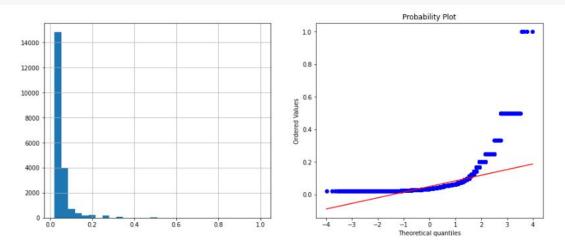

Логарифмическое преобразование

data['median_income'] = np.log(data['median_income'])
diagnostic_plots(data, 'median_income')

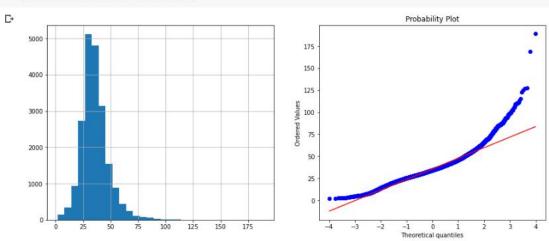

Обратное преобразование

[] data['median_house_value'] = 1 / (data['housing_median_age'])
diagnostic_plots(data, 'median_house_value')

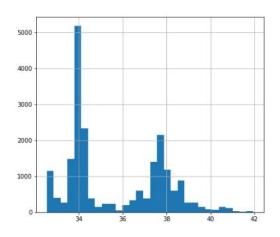

Квадратный корень

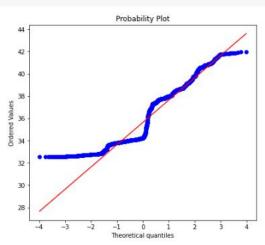

data['households'] = data['population']**(1/2)
diagnostic_plots(data, 'households')

Возведение в степень

[] data['latitude_exp2'] = data['latitude']**(2)
diagnostic_plots(data, 'latitude')

- data['Value_boxcox'], param = stats.boxcox(data['median_house_value']) print('Оптимальное значение \(\lambda\) = {}'.format(param)) diagnostic_plots(data, 'Value_boxcox')
- $_{\hbox{$\Bbb C}* оптимальное значение λ = -0.8093981353591877
